

Experimental Instructions

Welcome to the second part of the experiment.

You and the same 15 others participants from the first part have been assigned to a second experimental condition.

The second part is very similar to the first part with the following modification. The perfect sorting is now replaced with random sorting. This means that you will be assigned to Group 1 to 4 completely randomly, regardless to your decision of how to divide your coins between the personal account and the group account.

All the rest stays the same, and you can refer to the instructions of the first part as a reference.

Final Earnings

The final earnings for the whole experiment are given by the sum of your earnings for Part 1 and Part 2.

Example

The table below shows an example round with random sorting.

Compare it closely with the table given as example in the first part of the experiment, and try understand the differences.

Player ID	Group	Transfer to group account	Transfer to personal account	Total to group account	Amount returned to player	Total earnings for the round
8	3	11	9	37	18.5	27.5
15	4	2	18	37	18.5	36.5
10	1	17	3	37	18.5	21.5
12	3	7	13	37	18.5	31.5
5	2	16	4	44	22	26
13	4	5	15	44	22	37
9	3	10	10	44	22	32
6	2	13	7	44	22	29
3	1	20	0	58	29	29
7	2	14	6	58	29	35
4	3	8	12	58	29	41
14	1	16	4	58	29	33
16	4	6	14	40	20	34
1	2	14	6	40	20	26
11	1	19	1	40	20	21
2	4	1	19	40	20	39
